

IRENE HUANG

+1 (646) 982-6197 | irene.huang.227q@gmail.com | New York, NY | [LinkedIn](#) | [Portfolio](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Computer science and MBA graduate with experience in data analysis, systems design, and web development. Interested in applying technology and data-driven methods to improve decision-making in complex organizations, particularly in healthcare systems and digital platforms.

EDUCATION

Stony Brook University, SUNY **August 2025 - August 2026**
Master of Business Administration, General *GPA: 3.96/4.0*

Stony Brook University, SUNY **August 2021 - May 2025**
Bachelor of Science, Computer Science *GPA: 3.65/4.0*

TECHNICAL SKILLS

Programming: Python (Pandas, NumPy, scikit-learn, Matplotlib, PyTorch), Java, JavaScript, TypeScript, C, SQL, R

Web Development: React, HTML/CSS, Express.js, Electron

Databases: MySQL, PostgreSQL, MongoDB, NoSQL

Tools: Git, Excel/Sheets, LaTeX, Figma, Salesforce

PROFESSIONAL EXPERIENCE

Stony Brook University, SUNY **Stony Brook, NY, USA**
Marketing and Website Management *June 2025 - Present*

- Design and build UI components using HTML/CSS and JavaScript to develop and maintain webpages
- Coordinate cross-functional projects with stakeholders and manage content updates for institutional platforms
- Document system updates and maintain standardized processes to support ongoing platform improvements

Vivvi Early Learning **New York, NY, USA**
Admissions Intern *June 2022 - August 2022*

- Automated workflows using Google Scripts and Excel-based tracking systems, boosting enrollment rates
- Improved operational efficiency through process redesign and structured data reporting and tracking

RESEARCH EXPERIENCE & TECHNICAL PROJECTS

Binary Data Envelopment Analysis for Nutritional Efficiency Modeling *January 2026 - Present*

- Apply a binary Data Envelopment Analysis (DEA) model to evaluate nutritional efficiency within food groups
- Perform data preprocessing, model testing, and validation under faculty supervision

Soybean Price Modeling & Forecasting *August 2025 - December 2025*

- Built regression and time-series forecasting models to analyze price determinants in U.S. soybean markets, a high-demand and relatively inelastic commodity, generating monthly price forecasts
- Collected and preprocessed public datasets, and conducted statistical validation and hypothesis testing to evaluate model assumptions and interpret economically significant predictors

Relational Database Design for Online Stock Trading System *January 2025 - May 2025*

- Developed a relational database system to model financial trading workflows, including user accounts and transactions, with an emphasis on data integrity, constraints, and scalability
- Created ER diagrams, normalized relational schemas, and conducted performance testing for system reliability

BelugaNet Blockchain Application *August 2024 - December 2024*

- Led frontend development for a peer-to-peer file-sharing application with integrated cryptocurrency incentives
- Implemented core features including file input/output handling and frontend logic using TypeScript and HTML/CSS, focusing on user-friendly UI design, data security, and intuitive navigation
