

IRENE HUANG

+1 (646) 982-6197 | irene.huang.227q@gmail.com | New York, NY | [LinkedIn](#) | [Portfolio](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Computational researcher and MBA candidate with a background in computer science and experience applying data analysis, optimization, and decision-support methods in public health and environmental sustainability domains. Skilled in communicating technical and policy-relevant work to public audiences.

EDUCATION

Stony Brook University, SUNY
Master of Business Administration, General

August 2025 - December 2026

GPA: 3.96/4.0

Stony Brook University, SUNY
Bachelor of Science, Computer Science

August 2021 - May 2025

GPA: 3.65/4.0

TECHNICAL SKILLS

Programming: Python (Pandas, NumPy, scikit-learn, Matplotlib, PyTorch), R, SQL, Java, JavaScript, TypeScript, C

Quantitative Methods: Optimization, data envelopment analysis (DEA), multi-criteria decision analysis, clustering, regression, time-series analysis, hypothesis testing, model validation

Web Development: HTML/CSS, React, Node.js, Express.js, Electron.js, Vite

Databases: MySQL, PostgreSQL, NoSQL, MongoDB

Tools: Excel/Sheets, Jupyter Notebook, VBA, OpenSolver, LaTeX, Git, VS Code,

PROFESSIONAL EXPERIENCE

Renewable Energy Long Island (reLI)
Data Visualization Intern

Brentwood, NY, USA

May 2026 - August 2026

- Built a clean-energy dashboard for 15 Long Island municipalities to visualize progress on renewable energy goals, green buildings, electric vehicle infrastructure, and workforce development, and support local community and stakeholder climate and energy planning.
- Cleaned and standardized municipal data collected from disparate sources, creating a consistent dataset for comparing local climate-readiness efforts.

Stony Brook University, SUNY
Marketing and Website Management Graduate Assistant

Stony Brook, NY, USA

June 2025 - Present

- Develop accessible articles, news stories, web copy, and social media posts to communicate university research, initiatives, and opportunities to graduate students, faculty, staff, and external audiences.
- Design and maintain web interfaces to make information easier to navigate while ensuring accuracy, consistency, and ADA accessibility compliance.

RESEARCH EXPERIENCE & TECHNICAL PROJECTS

Data Envelopment Analysis (DEA) for Nutritional Efficiency Modeling

January 2026 - Present

- Model nutritional efficiency using DEA to identify foods that maximize beneficial nutrients while limiting dietary risk factors, with applications to food selection in public health and hospital systems.
- Implement optimization models across food groups using Excel, OpenSolver, and Python to quantify relative nutritional efficiency and examine multidimensional nutrient trade-offs.

Text-Informed Nutrition Prioritization for West Africa (Independent Research Project)

2026

- Investigated food selection with respect to regional constraints and population-specific nutritional needs using the West Africa Food Composition Table.
- Built a Python pipeline combining nutrient completeness with regional deficiency signals extracted from PubMed literature using ESearch/EFetch APIs, text mining, and TOPSIS.
- Produced food rankings and visual analyses using Python, Pandas, NumPy, and Matplotlib to inform nutrition prioritization and resource-allocation decisions.
